Terms and References

As students of the BSc. (Hons) in Information Technology - Computer Systems and Network Engineering specialization program at SLIIT, we were given an assignment by our lecturer; Mrs. Narmada Gamage, for the module Database Systems Administration. This is an individual assignment provided for us to explore Oracle12C and SQL Developer platforms.

Abstract

This assignment is about Installation, Configuration and Basic Management of Oracle 12c on Windows operating system which could be beneficial to those studying BSc (Hons) in Information Technology completing module “Database Architecture”. This exam covers the installation of Oracle 12c, using SQL commands to manage pluggable databases PDBs and general user administration features. The install is implemented at an Azure virtual machine running with Windows 10 created in the portal, which will give you basic skills of configuring and managing your database.

The tasks require configuring an Oracle 12c instance with recommended parameters, creating PDBs using Database Configuration Assistant (dbca), and managing users profiles and roles through SQL commands. Involves the creation of a user profile stipulating details such as default session, CPU and password policies alongside assignment of roles & privileges for secure access to databases.

After that, a few more activities via SQL Developer about schema object management — Tables creation, Data load and do indexing operations The final part of the task is to document every step with screenshots so a complete report can be compiled showing exactly what took place.

The assignment counts for a large chunk of the final grade in this class, and underscores how critical it is to get hands on experience with database systems administration. Oracle database management, user security and efficient data storage (these are essential skills every student needs to have, which theoretically strengthen their practical capacity as well) prepare them for real-world enterprise tasks.

Acknowledgement

We would like to express our deepest appreciation to the Sri Lanka Institute of Information Technology for providing us with the responsibility to complete this report. In addition, we would like to thank Mrs. Narmada Gamage, our DSA lecturer who played a great role in providing the necessary guidelines to complete this report. We would like to express our thanks to all the people who provided support us in finishing this project.

Table of Contents

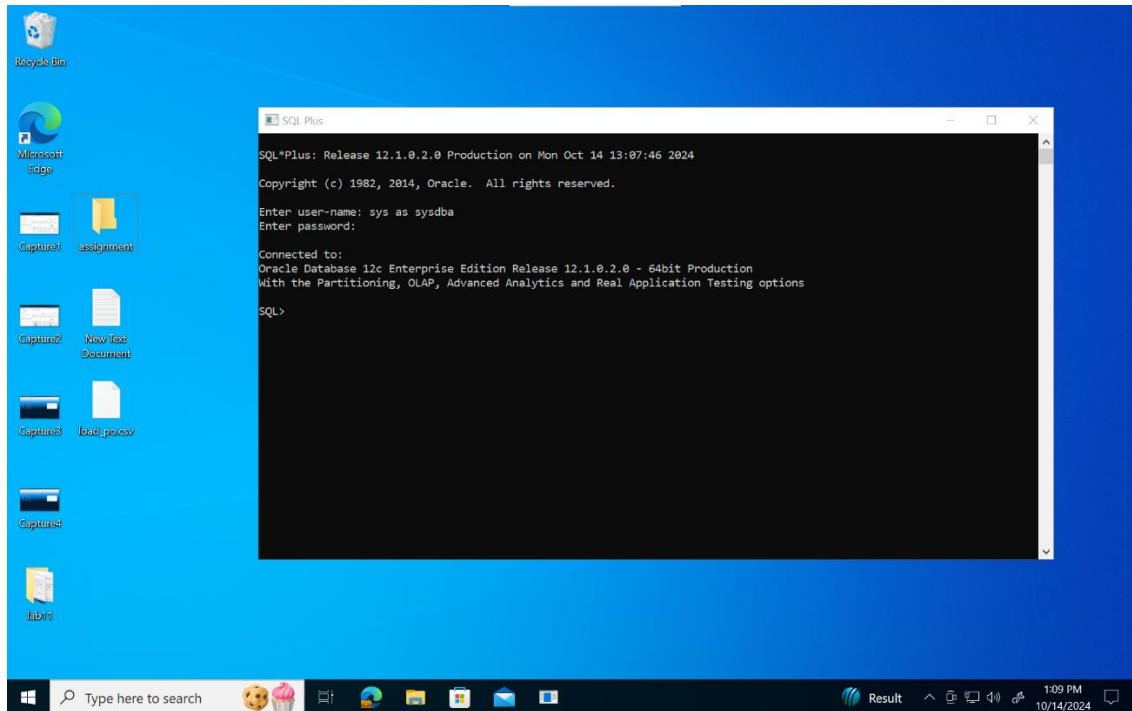

Part B : Create a PDB by using Database Configuration Assistant (DBCA).....	8
Step 1 - Log in to Oracle server using SQL plus (command prompt)	8
Step 2 - Create the database.....	8
Step 3 - Manage the pluggable database.....	9
Step 4 - Create the pluggable database.....	9
Step 5 - Selecting CDB for the PDB.....	10
Step 6 - Creating new PDB.....	10
Step 7 - Summary of the Newly created pluggable database.....	11
Step 8 - Receiving successful completion message.....	11
Step 9 - Receiving successful completion message.....	12
 Part C: Provide user administration and security using SQL PLUS.....	 13
Step 1 - Searching the new PDB.....	13
Step 2 - Altering the session and setting the container for the new PDB.....	13
Step 3 – Create the profile (Receptionist)	13
Step 4 – Create new table space (NishadiTS)	14
Step 5 – Create a new temporary tablespace (NishadiTEMP)	14
Step 6 – Create a new role (Receptionist)	14
Step 7 - Grant privilege to the newly created role (Receptionist)	14
Step 8 – Create a new user (Nishadi)	15
Step 9 – Connect the new database using the new user account (Nishadi)	15

Part D: Manage the schema objects using SQL developer.....	16
Step 1 – Create the database connection in SQL developer the newly created PDB.....	16
Step 2 – Check the new user available in the user list (Nishadi).....	16
Step 3 – Create the table (HotelReservations)	17
Step 4 – Importing Data from the file.....	17
Step 5 – Preview.....	18
Step 6 – Setting import method.....	18
Step 7 – Select Columns.....	19
Step 8 – Column Definition.....	19
Step 9 – Summary.....	20
Step 10 – Inserting the imported data into the table.....	20
Step 11 - All records were inserted successfully.....	21
Step 12 – Navigating the explorer to create an index for the table.....	21
Step 13 – Create an index for column ‘AVG_PRICE_PER_ROOM’ and naming the index as ‘AVG_PRICE_IX’	22
Step 14 – Verified the creation.	22

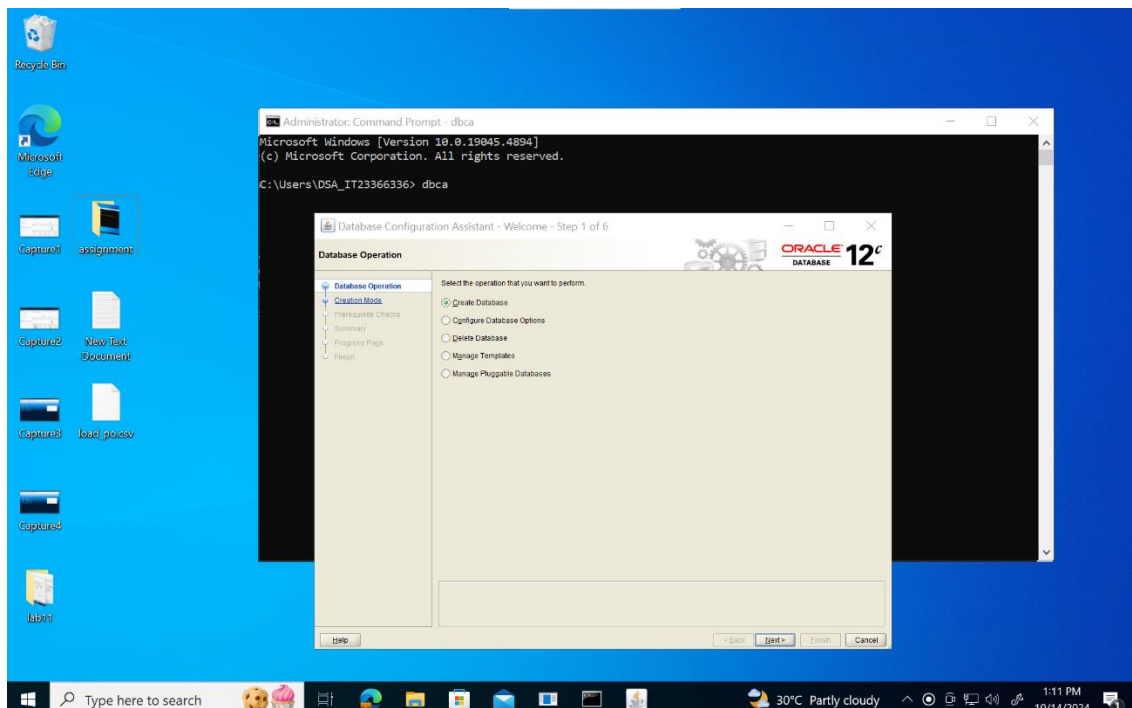

Part B:

Create a PDB by using Database Configuration Assistant (DBCA)

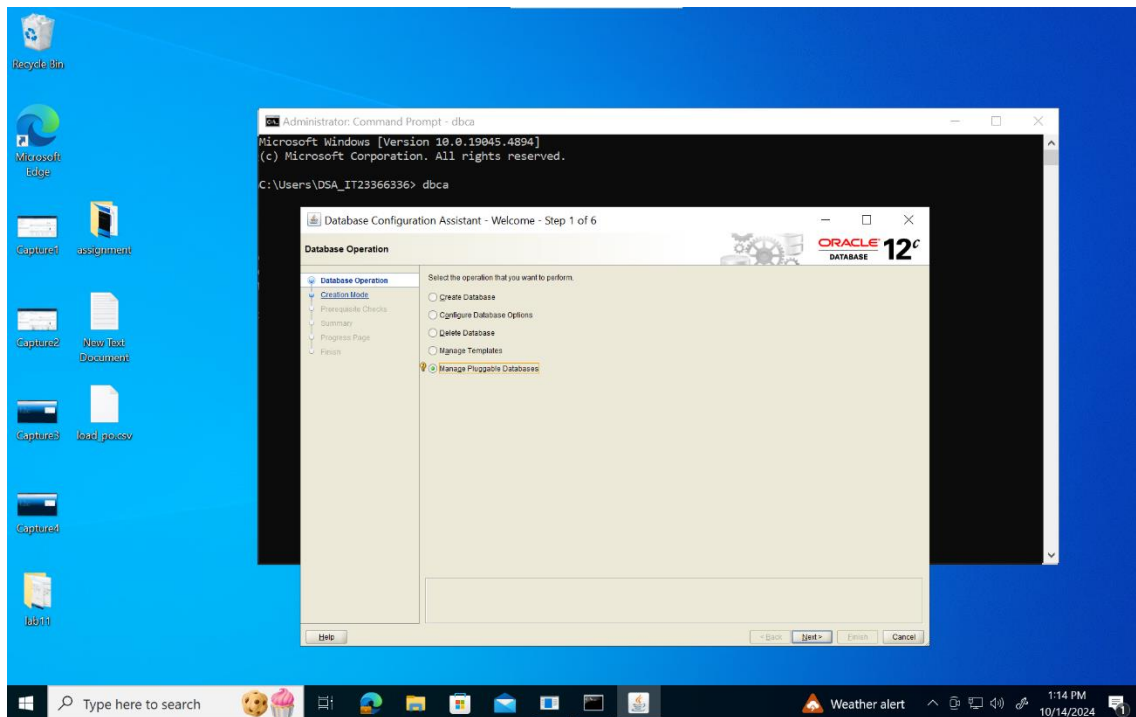

Step 1 - Log in to Oracle server using SQL plus (command prompt)

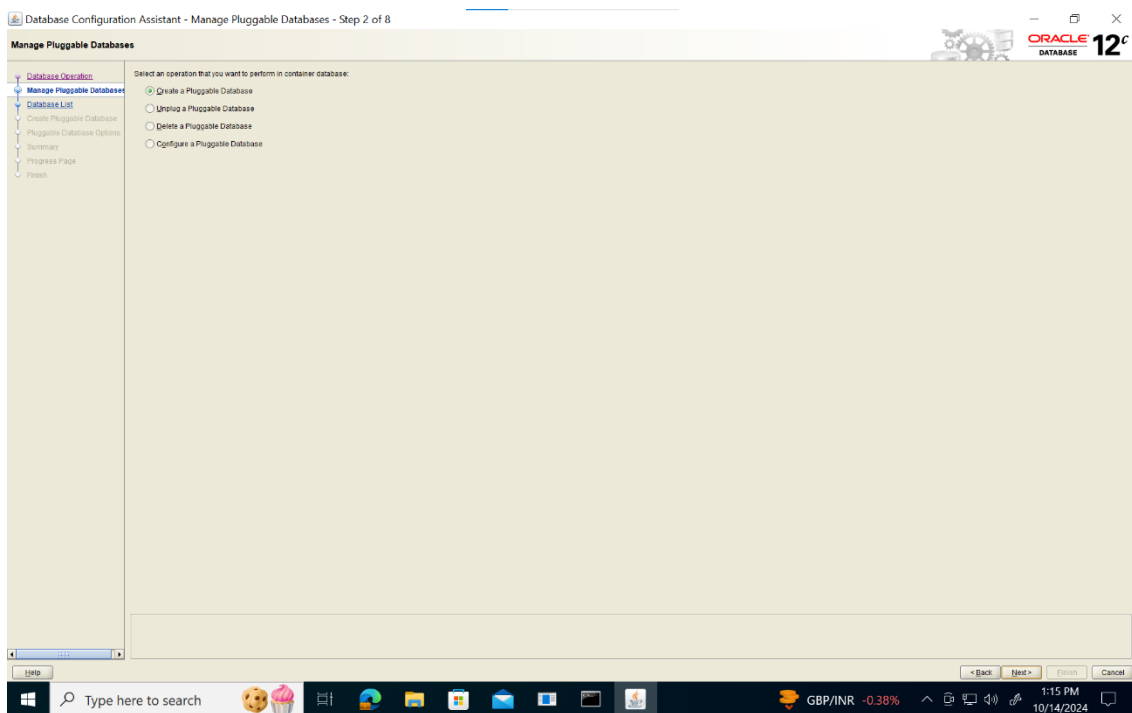

Step 2 - Creating the database

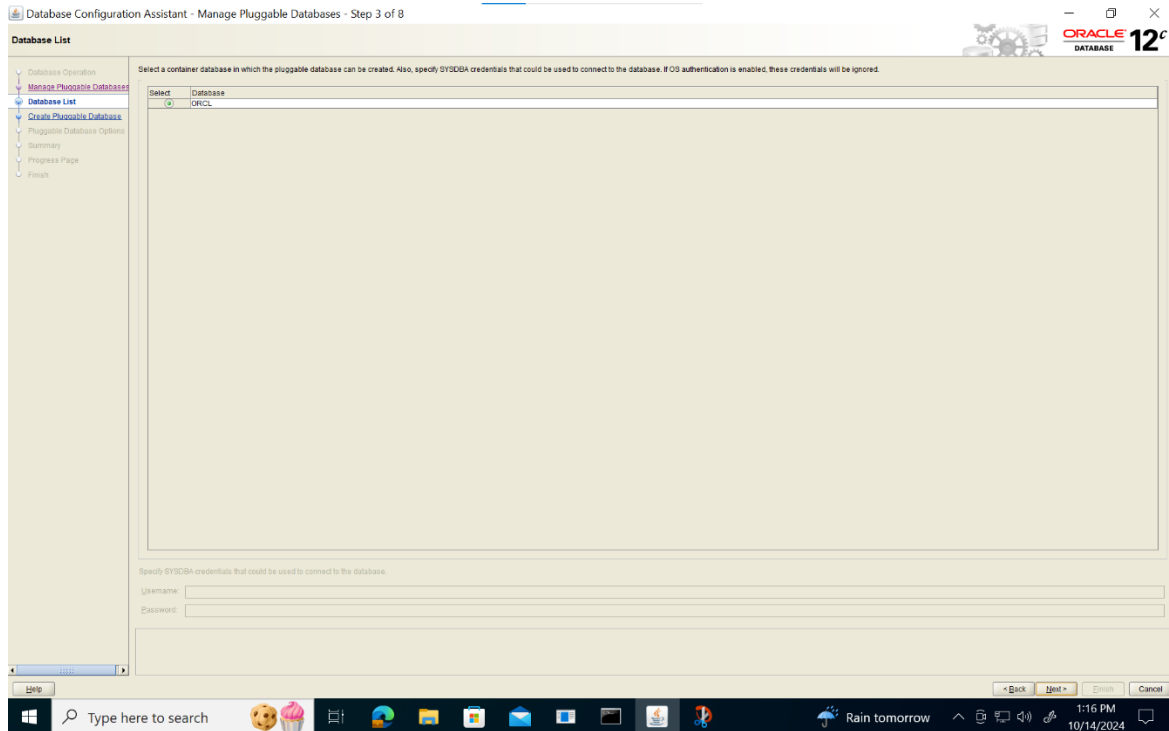

Step 3 - Manage the pluggable database

Step 4 - Create the pluggable database

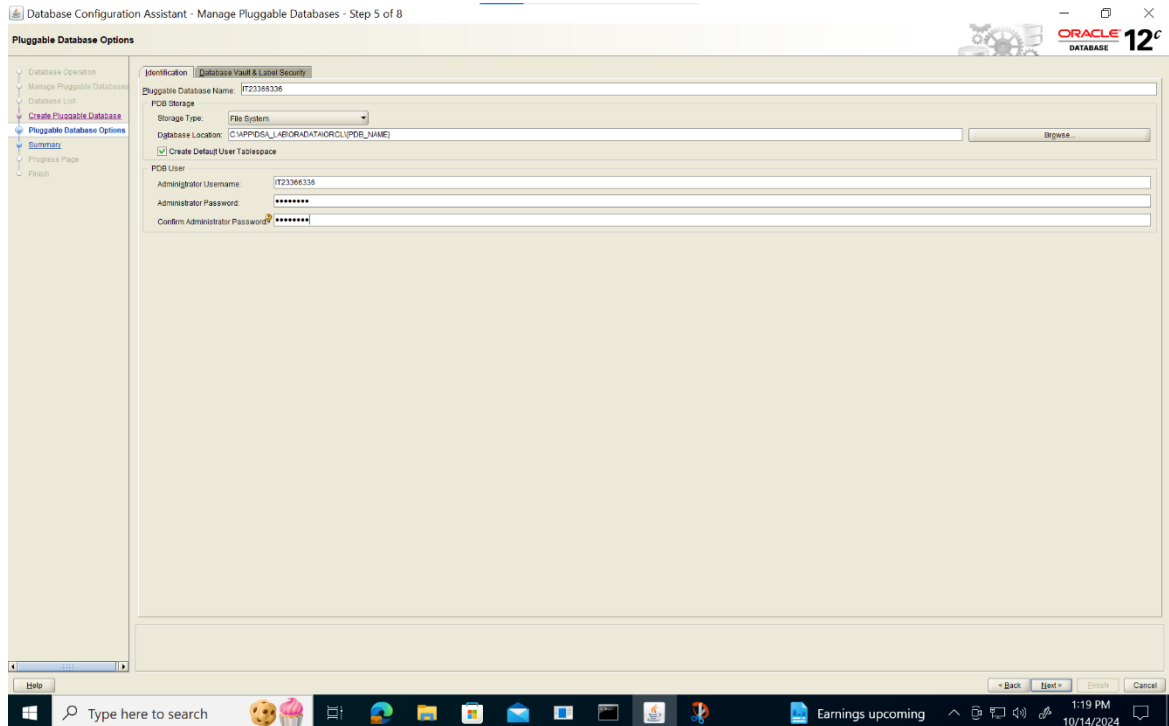

Step 5 - Selecting CDB for the PDB

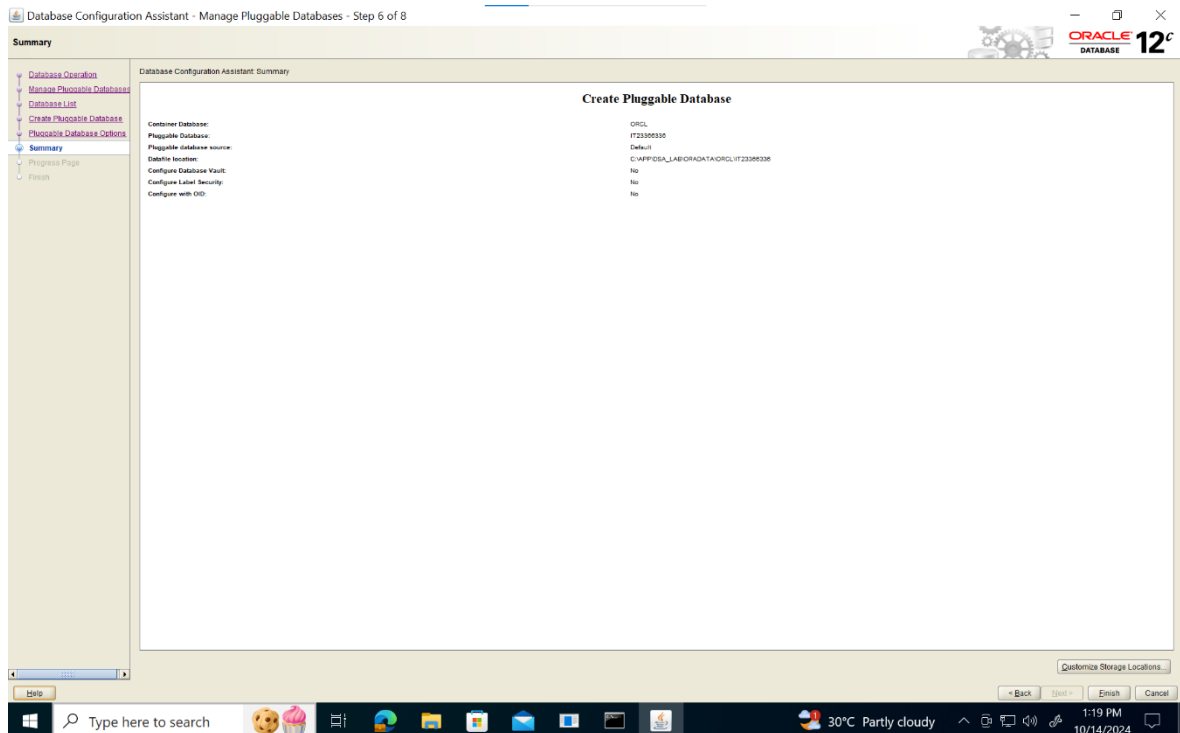

Step 6 - Creating a new PDB

Step 7 – Add the necessary details

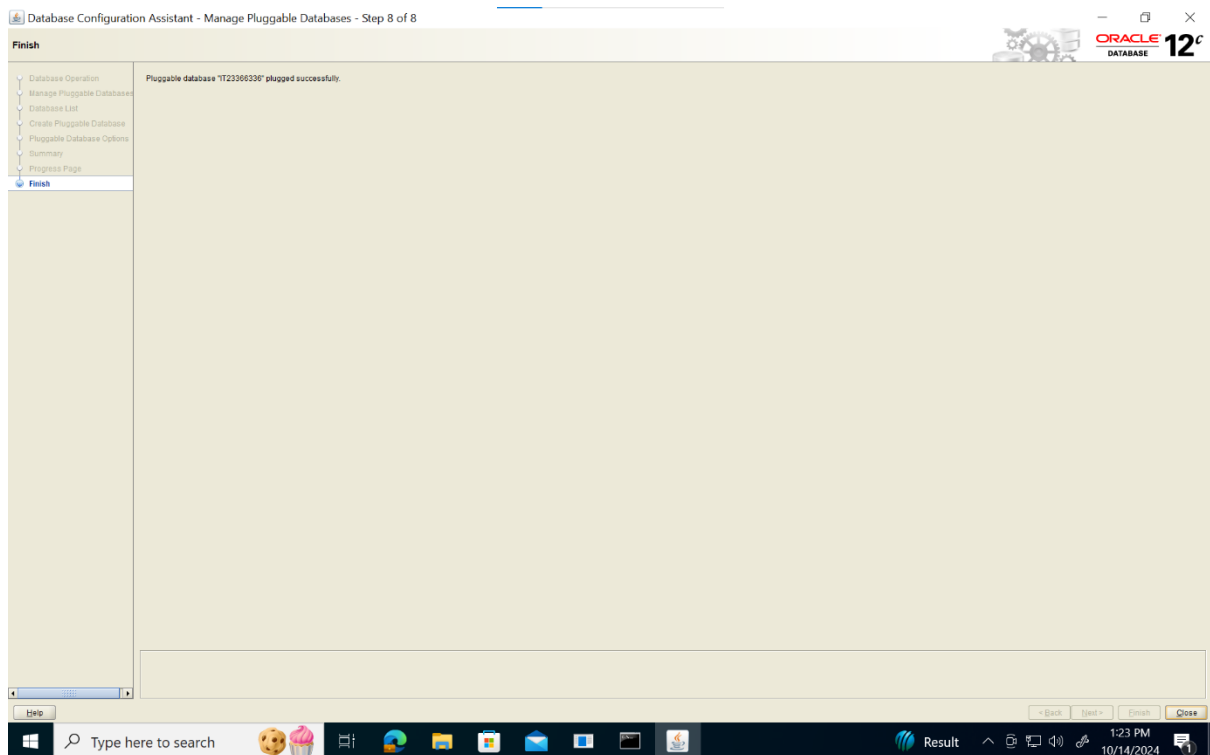

Step 8: Summary of the Newly created pluggable database

In progress....

Step 9 - Receiving successful completion message

Part C:

Provide user administration and security using SQL PLUS

Step 1 - Searching the new PDB

```
SQL> select con_id, name, open_mode from v$pdb;
```

CON_ID	NAME	OPEN_MODE
2	PDB\$SEED	READ ONLY
3	PDBORCL	MOUNTED
4	IT23366336	READ WRITE

Step 2 - Altering the session and setting the container for the new PDB

```
SQL> alter pluggable database IT23366336 open;
alter pluggable database IT23366336 open
*
ERROR at line 1:
ORA-65019: pluggable database IT23366336 already open
```

```
SQL> alter session set container = IT23366336;

Session altered.

SQL>
```

Step 3 – Creating the Receptionist profile

```
SQL> create profile RECEPTIONIST
 2 limit
 3 sessions_per_user unlimited
 4 CPU_PER_SESSION UNLIMITED
 5 CPU_PER_CALL 3000
 6 CONNECT_TIME 40
 7 LOGICAL_READS_PER_SESSION default
 8 LOGICAL_READS_PER_CALL 1000
 9 PRIVATE_SGA 25K
10 COMPOSITE_LIMIT 5000000
11 FAILED_LOGIN_ATTEMPTS 3
12 PASSWORD_LIFE_TIME 180
13 PASSWORD_REUSE_TIME 30
14 PASSWORD_REUSE_MAX 7
15 PASSWORD_LOCK_TIME 1/24
16 PASSWORD_GRACE_TIME 7
17 PASSWORD_VERIFY_FUNCTION null
18 ;

Profile created.
```

Step 4 – Create new tablespace (NishadiTS)

```
SQL> create tablespace NishadiTS
  2  datafile 'Nishadi_perm.dat'
  3  size 100M
  4  reuse
  5  autoextend on next 10M MAXSIZE UNLIMITED;

Tablespace created.
```

Step 5 – Create a new temporary tablespace (NishadiTEMP)

```
SQL> create temporary tablespace NishadiTEMP
  2  tempfile 'Nishadi_temp.dbf'
  3  size 10M
  4  autoextend ON;

Tablespace created.
```

Step 6 – Creating a new role called 'Receptionist'

```
SQL> create role RECEPTIONIST;

Role created.

SQL> grant connect , resource, dba to RECEPTIONIST;

Grant succeeded.
```

Step 7 - Grant privilege to the new role Receptionist

```
SQL> grant
  2  CREATE TABLE,
  3  CREATE VIEW,
  4  CREATE PROCEDURE,
  5  CREATE SESSION,
  6  CREATE TRIGGER,
  7  CREATE SYNONYM to Receptionist;

Grant succeeded.
```

Step 8 – Create a new user (Nishadi)

```
SQL> CREATE USER Nishadi
  2 IDENTIFIED BY Oracle_1
  3 DEFAULT TABLESPACE NishadiTS
  4 TEMPORARY TABLESPACE NishadiTemp
  5 PROFILE Receptionist;

User created.
```

Step 9 – Connect the new PDB by using the new user account (Nishadi)

```
SQL> CONNECT SYS/Oracle_1@localhost/IT23366336 as sysdba
Connected.
SQL> GRANT CREATE SESSION to Nishadi;

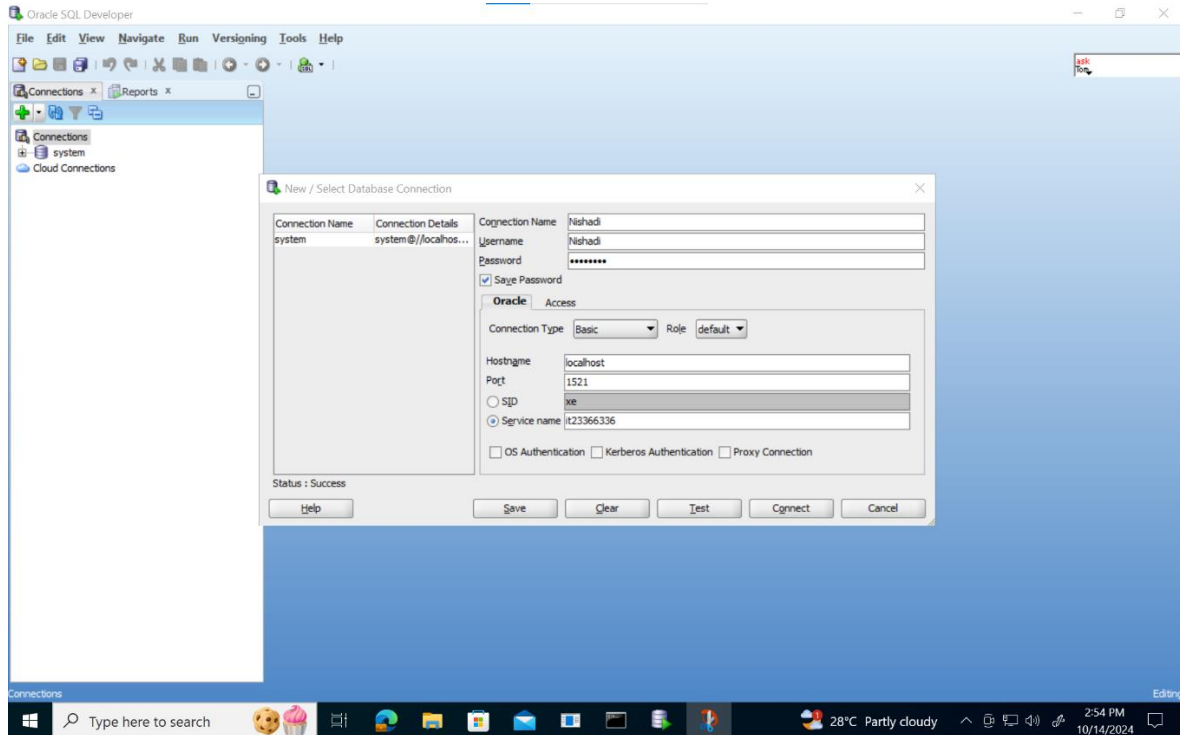

Grant succeeded.

SQL> connect NISHADI/Oracle_1@localhost/IT23366336;
Connected.
```

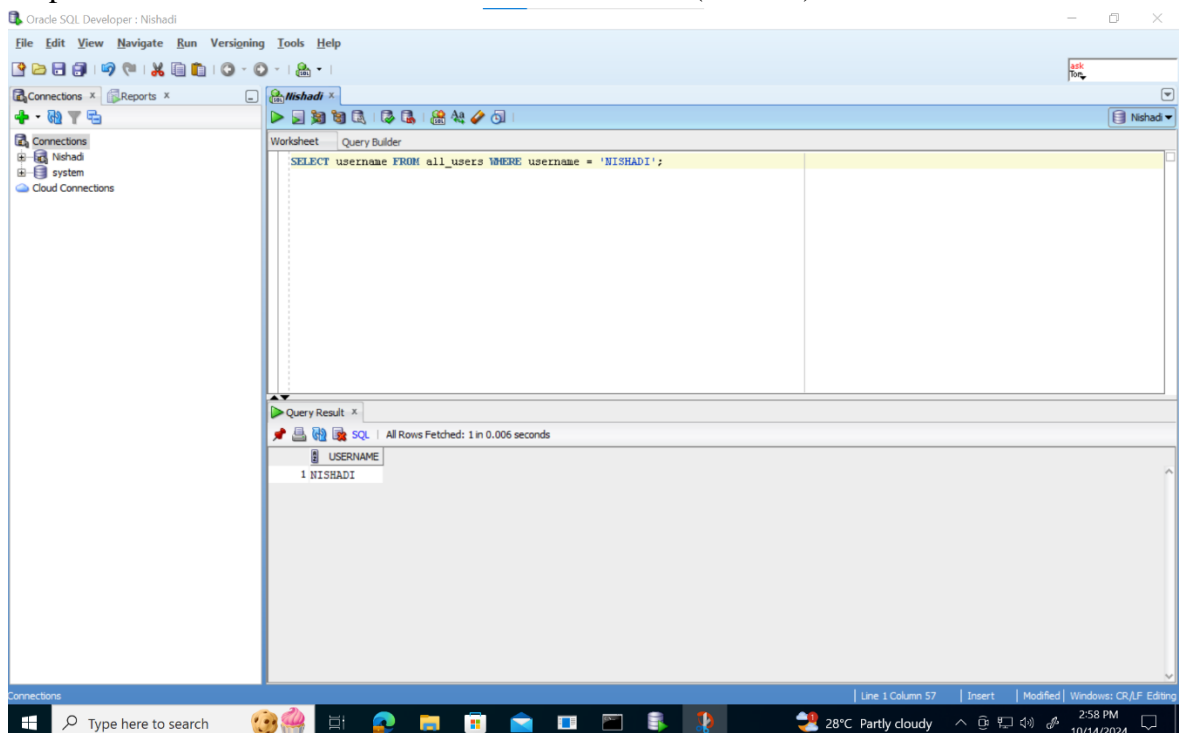

Part D:

Manage the schema objects using SQL developer

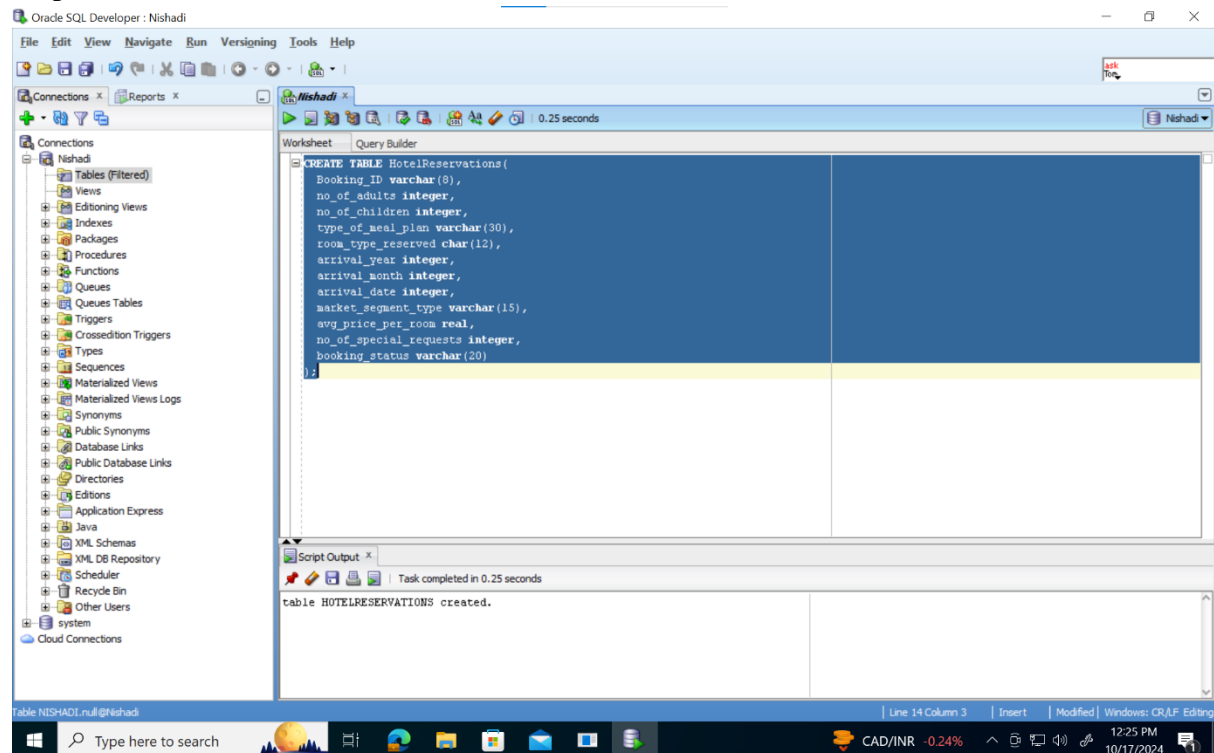

Step 1 – Create the database connection in SQL developer the newly created PDB

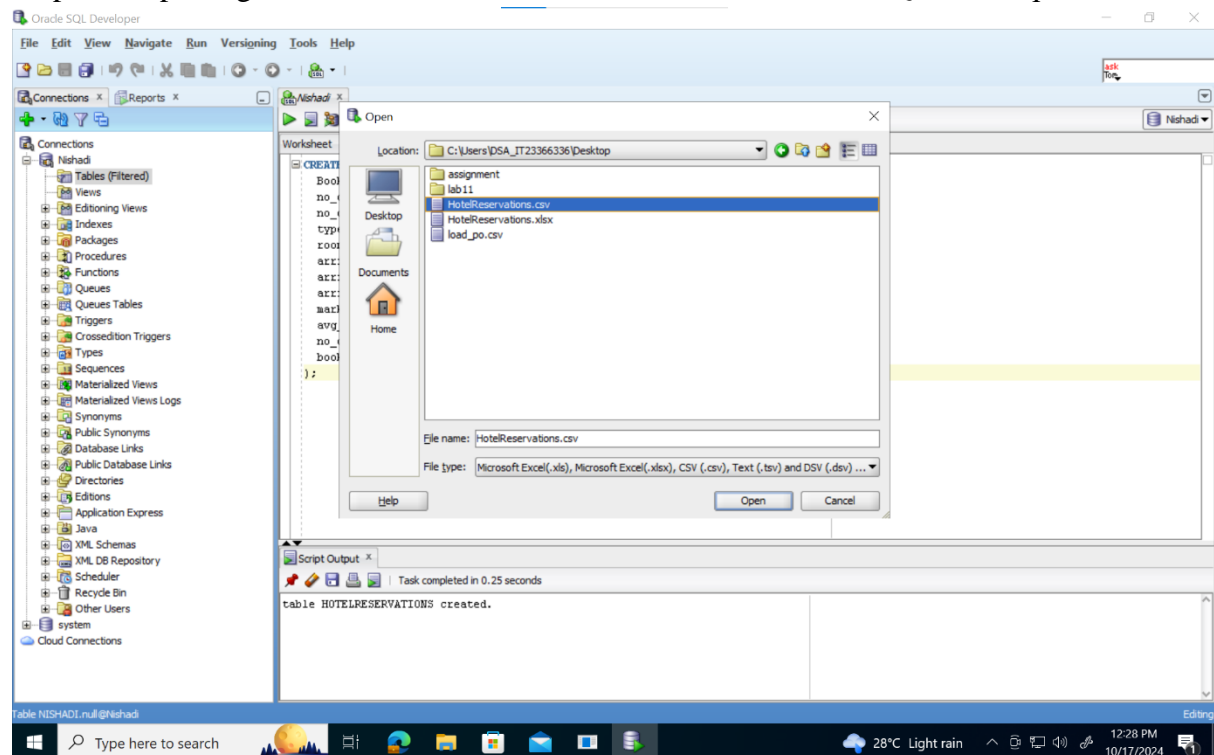

Step 2 – Check the new user available in the user list (Nishadi)

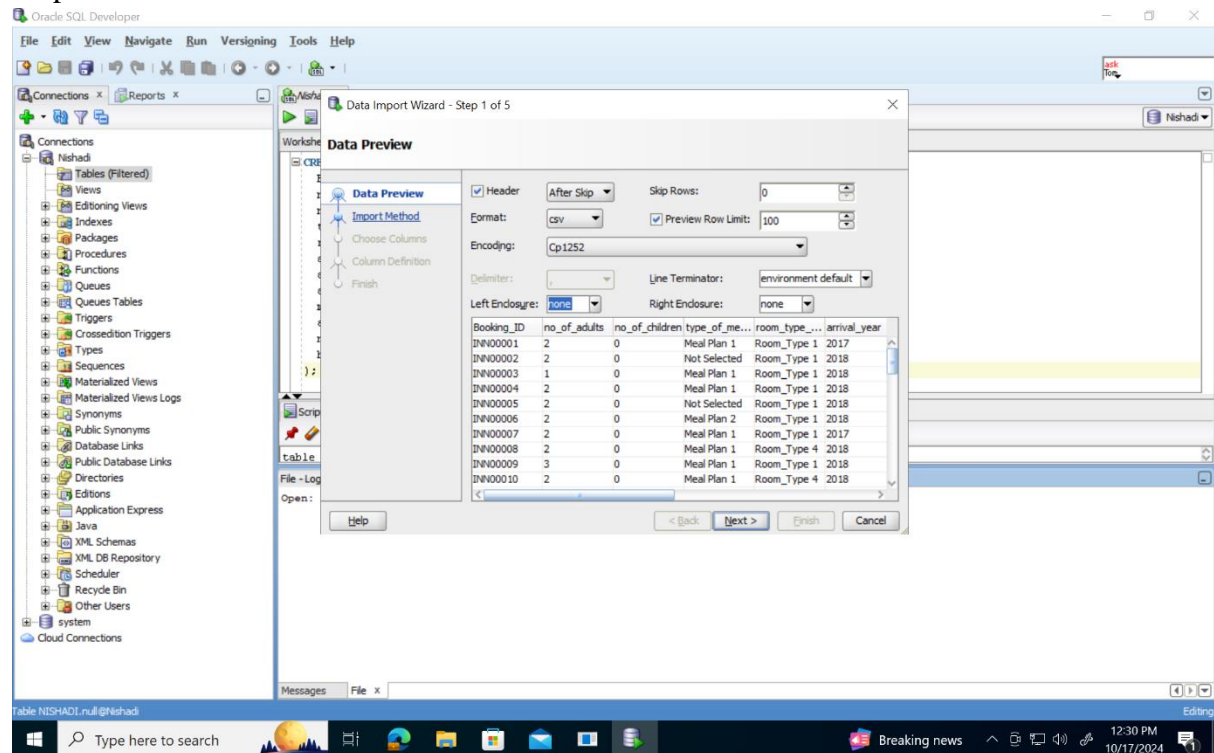

Step 3 – Create the table (HotelReservations)

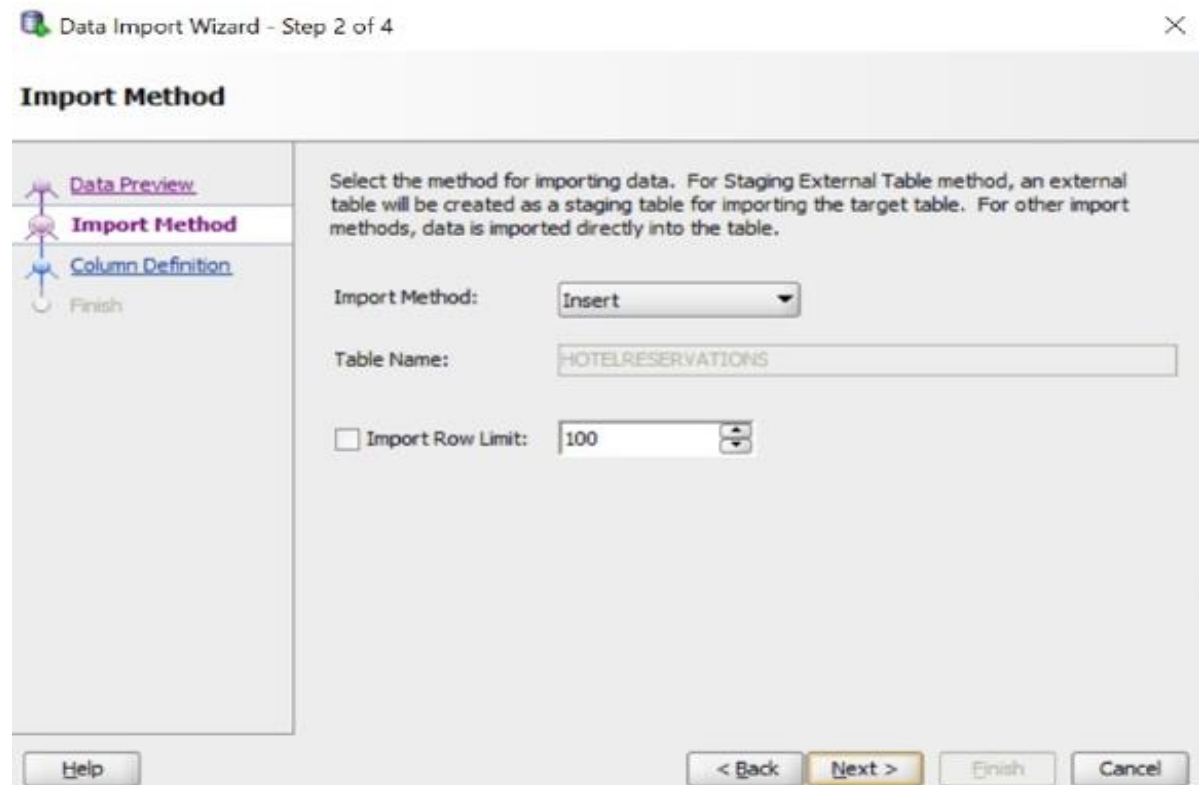

Step 4 – Importing Data from the file 'HotelReservations.csv' into SQL Developer

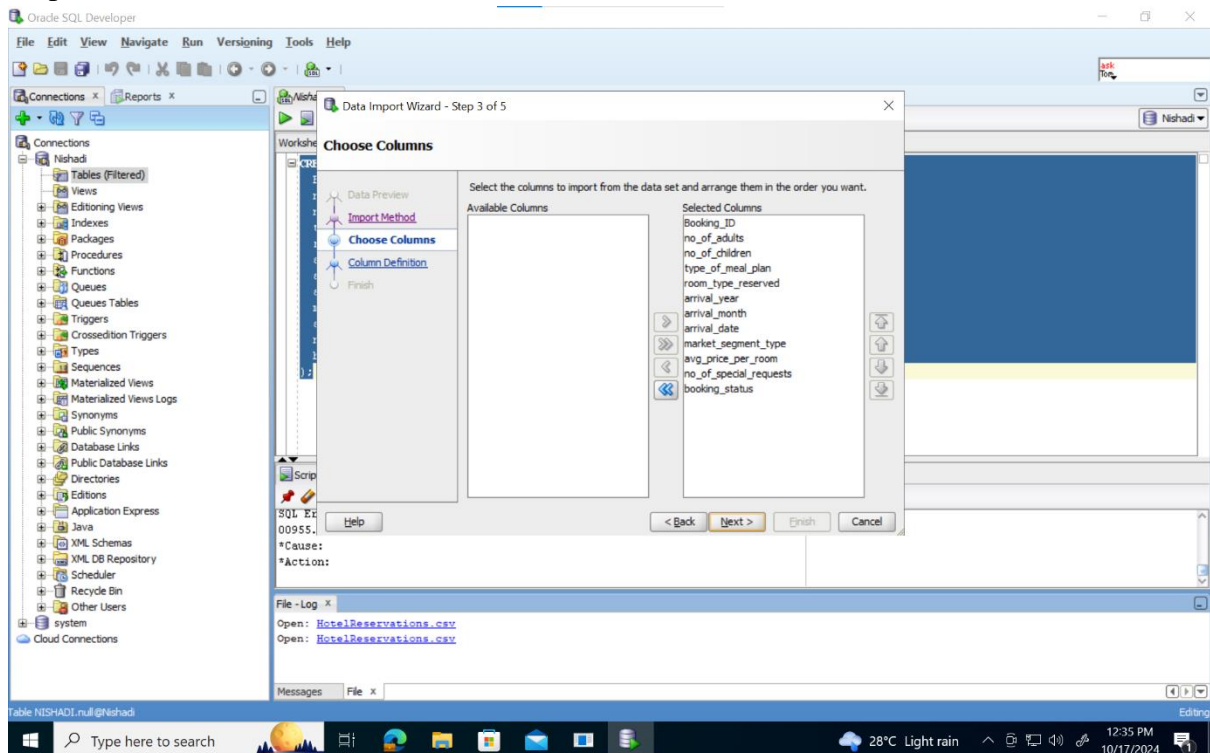

Step 5 – Preview

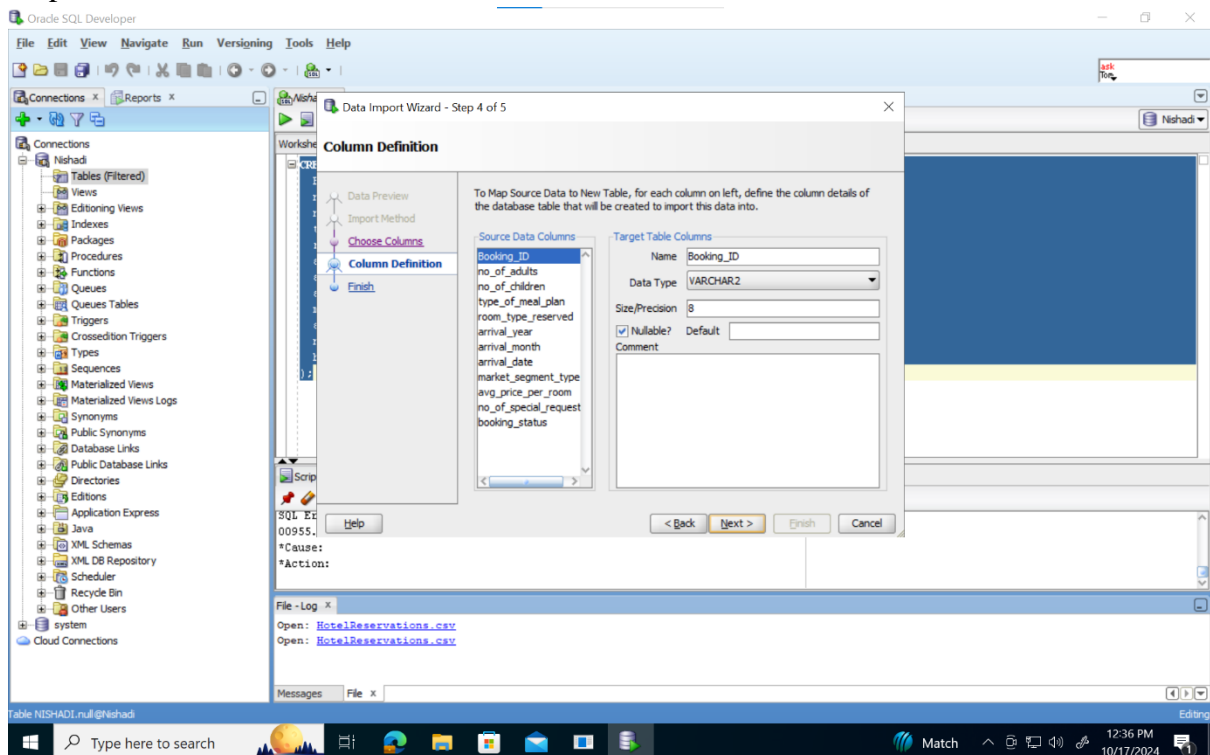

Step 6 – Setting import method

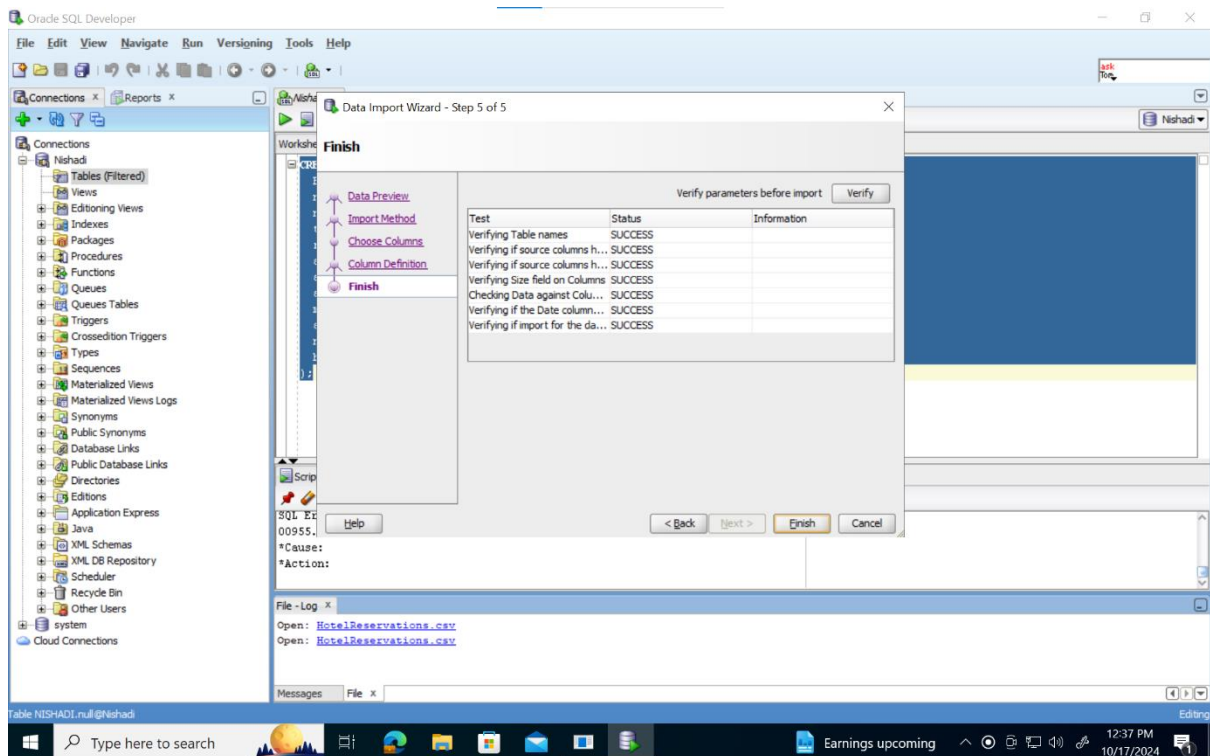

Step 7 – Choose Columns

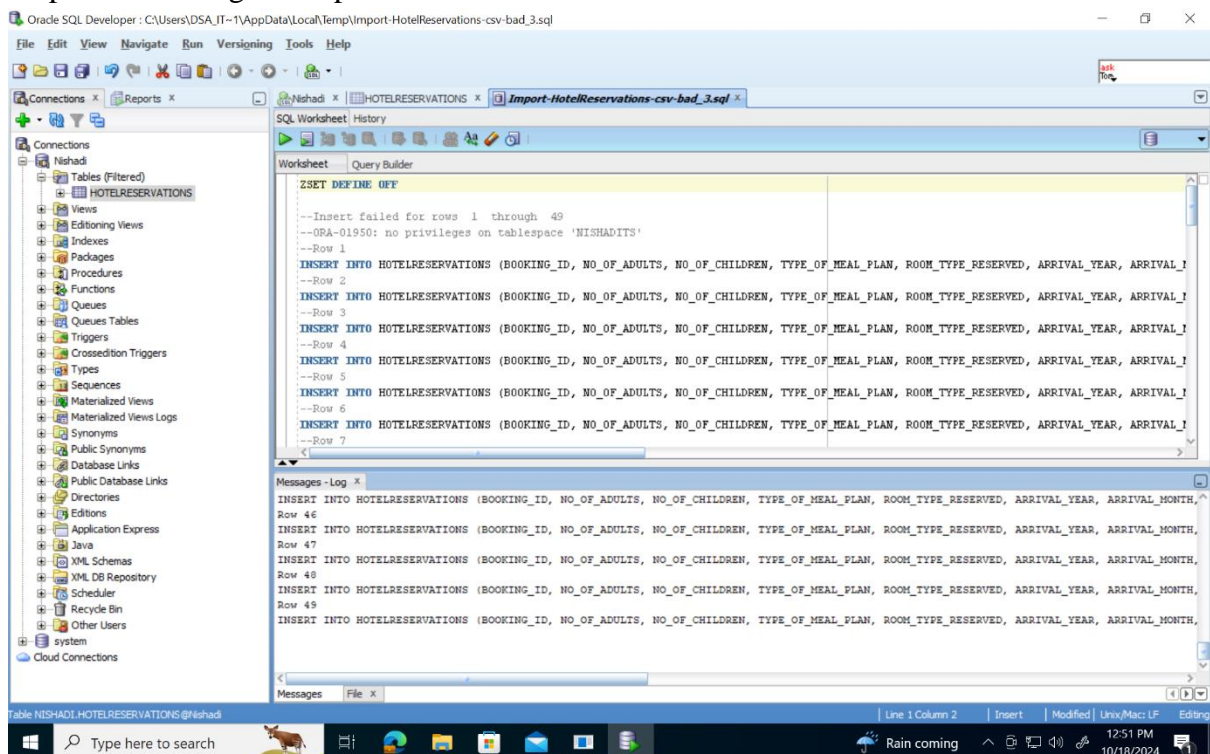

Step 8 – Column definition

Step 9 – Summary

Step 10 - Inserting the imported data into the table

Step 11 - All records were inserted successfully

The screenshot shows the Oracle SQL Developer interface. The left pane displays the 'Tables (Filtered)' list under the 'HOTELRESERVATIONS' schema. The main pane shows the 'Query Result' window with the following data:

BOOKING_ID	NO_OF_ADULTS	NO_OF_CHILDREN	TYPE_OF_MEAL_PLAN	ROOM_TYPE_RESERVED	ARRIVAL_YEAR	ARRIVAL_MONTH	ARRIVAL_DATE	MARKET_SEGM
220	2	0	Meal Plan 1	Room_Type 1	2017	9	21	Offline
221	1	0	Meal Plan 1	Room_Type 4	2018	5	19	Aviation
222	1	0	Meal Plan 1	Room_Type 1	2017	11	6	Online
223	2	0	Meal Plan 2	Room_Type 1	2017	9	17	Offline
224	2	0	Meal Plan 1	Room_Type 4	2017	9	19	Online
225	2	0	Meal Plan 1	Room_Type 1	2018	11	13	Online
226	0	2	Meal Plan 1	Room_Type 2	2018	12	7	Online
227	2	0	Not Selected	Room_Type 1	2018	1	9	Online
228	2	0	Meal Plan 1	Room_Type 1	2018	10	7	Offline
229	2	0	Not Selected	Room_Type 1	2018	4	27	Online
230	1	0	Meal Plan 1	Room_Type 1	2018	6	19	Online
231	2	0	Meal Plan 1	Room_Type 1	2017	10	17	Offline
232	2	0	Not Selected	Room_Type 1	2018	11	19	Online
233	2	0	Meal Plan 1	Room_Type 4	2018	7	30	Online
234	2	0	Meal Plan 1	Room_Type 1	2018	11	1	Online
235	2	0	Meal Plan 1	Room_Type 1	2018	6	21	Online
236	3	0	Meal Plan 1	Room_Type 1	2018	4	10	Online
237	2	0	Not Selected	Room_Type 1	2018	6	27	Online
238	2	0	Meal Plan 1	Room_Type 4	2017	11	18	Offline
239	2	0	Meal Plan 1	Room_Type 1	2017	12	29	Offline
240	1	0	Meal Plan 1	Room_Type 1	2017	11	20	Offline
241	2	0	Meal Plan 2	Room_Type 1	2018	4	6	Offline

Step 12 - Navigating the explorer to create an index for the table

The screenshot shows the Oracle SQL Developer Explorer. The 'Indexes' folder is selected, and a context menu is open with the following options:

- New Index...
- Open
- Refresh (Ctrl-R)
- Apply Filter...
- Clear Filter
- Help

Step 13 – Create an index for column ‘AVG_PRICE_PER_ROOM’ and naming the index as ‘AVG_PRICE_IX’

Create Index

Schema: NISHADI

Name: AVG_PRICE_IX

Definition: DDL

Schema: NISHADI

Table: HOTELRESERVATIONS

Type: ☒ Normal ☐ Domain

☒ Non-unique ☐ Unique ☐ Bitmap

Index:

AVG_PRICE_PER_ROOM

Column Name or Expression: AVG_PRICE_PER_ROOM

Order:

Help OK Cancel

Step 14 – Verified the creation.

```
drop index AVG_PRICE_IX

select index_name, table_name
from user_indexes
where index_name = 'AVG_PRICE_IX';
```

Query Result x

SQL | All Rows Fetched: 1 in 0.055 seconds

	INDEX_NAME	TABLE_NAME
1	AVG_PRICE_IX	HOTELRESERVATIONS
